

Project Requirements Document: Original Smart Masters

BI Analyst:

Josiah Lewis

Client/Sponsor:

Original Smart Masters

Purpose:

Original Smart Masters is a trading company seeking to gain deeper visibility into their sales performance across multiple dimensions including product categories, sales personnel, and time periods. The goal is to understand revenue drivers, gross profit margins, and pipeline health to inform strategic sales decisions and improve overall business performance.

Key Dependencies

Stakeholders

- Head of Sales / Director — overall sales strategy and KPI ownership
- Sales Manager — day-to-day sales team oversight, commission and performance tracking
- Finance Manager — gross profit margins, outstanding amounts, and invoicing
- Business Development Lead — pipeline management and sales opportunity tracking

Team Members

- BI Analyst — dashboard development and data modelling
- Data Engineer — ETL pipeline and data warehouse management
- Data Governance Manager — data quality, compliance, and access control

Stakeholder Requirements

- R: Must include total sales, invoices amount, outstanding amount, gross profits, and gross profit margin metrics
- R: Must display sales contribution by sales person and sales breakdown by product category
- R: Must show monthly sales trends for the full calendar year

- D: Should include time intelligence features — YTD, MTD, and period-over-period growth comparisons
- D: Should show profitability by category including BENCH, MISC, TABLE, CHAIR, PARTS, BEANS, EM_COMMER, CM_COMMER
- D: Should track sales pipeline — total opportunities, opportunities in progress, and opportunities won
- D: Should break down estimated opportunity value by customer

Success Criteria

- Project will be completed in 5 weeks.
- Dashboard will be fully functional and accessible to all relevant stakeholders.
- All five dashboard pages (Sales Overview, Sales by Item, Sales by Sales Person, Time Intelligence, Sales Opportunities) must be operational.
- Data must be accurate and refresh on a scheduled basis.
- Dashboard must support filtering by date, category, and sales person.

User Journeys

Sales Manager: Logs in weekly to review individual sales person contributions and MTD gross profit trends to identify underperformers and coach accordingly.

Finance Manager: Reviews outstanding amounts and gross profit margins monthly to reconcile invoices and report to executives.

Business Development Lead: Monitors the sales opportunities pipeline daily to prioritise follow-ups and track win rates.

Assumptions

- Sales data is stored in a centralised ERP or CRM system and can be extracted via standard connectors.
- Sales persons listed represent the current active sales team.
- Data spans fiscal years 2021–2025 and will remain available in the data warehouse.
- Currency is in Kenyan Shillings (KES) unless otherwise specified.

Compliance and Privacy

- Customer data (Customer_No references) must be anonymised or access-restricted to authorised personnel only.
- Sales person performance data must comply with internal HR data-handling policies.
- Dashboard access to be role-based: executives see aggregate views; sales persons see only their own data.

Accessibility

- Dashboard must be accessible to all team members regardless of device (desktop, tablet).
- Sufficient colour contrast must be used throughout all charts and visuals.

Roll-out Plan

Week	Activities
Week 1	Dataset assigned. Data profiling and stakeholder kickoff. Define KPIs and confirm field requirements.
Week 2	SQL queries and ETL pipeline development. Build data model (sales, items, customers, opportunities).
Week 3	Finalise SQL. Build Time Intelligence measures (YTD, MTD, POP). Dashboard design and 1st draft peer review.
Week 4	Full dashboard development. User acceptance testing with stakeholders.
Week 5	Bug fixes, performance optimisation, deployment, and handover documentation.
